Poly Viewpoint is an instructional laboratory quarterly publication published during the academic year by California Polytechnic College students under the supervision of the Dept. of Journalism. This issue of Poly Viewpoint is devoted to campus activities, a magazine entirely produced by students using various aspects of college life. Poly Viewpoint is printed by the Santa Maria Times using four-color processing.

Well Groomed Angels

by Mike Williams

Pedestrians — Beware

The light-weight sports cycle, although relatively new on the college scene, is definitely "in" and it is rapidly changing the "Hells Angels" image formerly associated with the motorcycle crowd.

College students like the advantages they offer: ease of handling, economy of operation, maneuverability in campus traffic jams, and perhaps best of all, no parking problems in any of the cycle parking areas on campus.

They can't be beat, cyclists say, for the feeling of freedom they provide and just plain fun.

It's true that bad weather offers a slight discouragement to the suit-clad cyclist, but when the sun is shining, he is king of the road and he knows it—just look at some of the smiling couples riding around campus or down at the beach on one of these warm weekends.

Some of the more adventurous cycle buffs enter their machines in the annual motorcycle Enduro hosted by the Poly Penguin's Motorcycle club. Although this endurance run is meant for the much more powerful and rugged scrambler-type cycle, and it is a grueling test of the most rugged of both men and machines, several of the light-weights enter and finish with the best of them.

? ? ? ?

Freedom — a thing with two wheels and a lot of power

You meet the nicest people on a Honda

HONDA 50 (50 cc) — The ultimate in low-cost transportation. Perfect for the college campus. The famous Honda 50 is the possessor of lightweight motorcycles. Travels up to 200 miles on a single gallon of gasoline. Its four-stroke 50 cc OHV engine has an automatic clutch, three-speed foot shift and an optional electric starter. Most important, it's easy to ride, and even easier to buy.

\$239.00

HONDA SPORT 160 (160 cc) — The hot Sport 160 combines competition level performance with lightweight smoothness of operation and handling. The Sport 160's four-stroke power-saving overhead-camshaft twin-cylinder power plant delivers 16.5 BHP at 10,000 rpm. The powerful motorcycle is a fine buy at—

\$615.00

HONDA SUPER 90 (90 cc) — A sleek sports machine for riders who prefer a lightweight. The Honda Super 90 produces a remarkable 8 BHP at 9,500 rpm, yet weighs in at only 176 pounds. Powerful, sure, and agile, the Super 90 is capable of speeds up to 65 mph. It boasts a feather-light clutch, telescopic front fork, and perfect balance. A winner.

\$355.00

The DRAFT . . .

by Robert Koczor

This is the true story of a 21-year old college student here at Cal Poly. In order not to cause any embarrassment, let's give him a non de plume. Let's call him Bud.

Bud had never before been so interested in world affairs as now. Never before -- not even in his history and political science courses -- has Bud been so deeply concerned about what is happening half-way around the globe.

Bud had previously regarded Viet Nam as a small, insignificant Asian country 7,000 long, long miles away from San Luis Obispo. Now Bud considers Viet Nam as quite significant and only around the corner.

And why is Bud now so wrapped-up with what the President or Secretary of Defense says about our foreign policy? Why does Bud, with only two more quarters until graduation, study harder than ever before?

Because Bud -- like hundreds of thousands of other young men of normal intelligence -- faces the Rubicon of serving his military obligation to his country. . .

When Bud had registered as a freshman at Cal Poly back in 1963, he outlined to himself how and when and where he was going to spend his military service.

Bud had decided that he would first graduate, then sign up in the Army as an officer. Come hell or high water, Bud had a plan and nothing was going to stop him from carrying it out.

A couple years ago Bud's father warned him that the cold war could someday affect him directly before graduation. His father suggested taking positive action through, for example, an ROTC Program.

But Bud brushed off his father's advice. Bud rationalized that there were millions of young men not attending college who were eligible for the draft. And besides, Bud thought, he didn't want to attend classes in a military uniform. . .

So Bud kept rationalizing. He figured that with a college degree he could tell Uncle Sam what he wanted to do during his service career. Bud even planned on picking San Francisco as his duty station! Bud planned on having a choice in the military service.

But Bud's plans made in 1963 have now turned into sugar-coated dreams. . .

With the escalation of the Viet Nam War to a status fairly comparable to that which was fought in Korea, draft quotas have tripled. Qualifications for meeting draft requirements have been lowered. And

the college campus is no longer guaranteed as a privileged sanctuary from Uncle Sam.

Yes, Bud's plans of 1963 are only dreams now. He now realizes that it's a "helluva" lot harder for the average guy to graduate before being drafted. Since January, in fact, Bud has said goodbye to two of his buddies who were reclassified I-A, provided uniforms, and shipped overseas.

Bud's problem now is not whether he's going to be drafted. Bud's worried about when the mailman will deliver the induction notice.

Last week Bud was asked what new plans he had for fulfilling his military obligations.

"Well," Bud said, "at first I talked with a college counselor about my chances of being pulled out of school before graduation."

"When the counselor mentioned that the selective service director had recently said that colleges may supply the additional manpower to support the war, that's when I realized I had to take some positive action."

"Later," Bud continued, "I learned that the policy of each of the 50,000 draft boards throughout the country differs. Each draft board is authorized by Congress to determine its own policy about who is eligible for the draft."

"The general trend of most boards is to classify male students with a school deferment (II-S) unless they make less than normal progress."

Bud indicated that normal progress means that the student completes college in four years after high school graduation. Dropping out of college for a year, for example, would normally make a student eligible for induction at the end of three years of college.

Normal progress also means that the male student takes a minimum of 15 units every quarter and maintains a 2.0 GPA. Meeting these qualifications, however, does not absolutely guarantee a II-S deferment.

Bud noted that many boards don't grant II-S deferments. For those students to whom the 4-year school deferment is not available, a temporary school deferment (I-SC) is sometimes possible.

A student can qualify for a I-SC deferment for only one school year. Prerequisites for this temporary deferment require that the student has passed his physical examination and received an induction notice.

Bud said that he had not, as yet, taken a physical examination or received an induction notice. But he's concerned whether -- now that the elections are over --

IF YOU HAVE ANY QUESTIONS, CONTACT YOUR LOCAL BOARD OR THE SELECTIVE SERVICE SYSTEM.

Uncle Sam 'greet's' student

will be pulled out of school before graduating next.

A few days ago, Bud talked with Major Waite, ROTC instructor at Cal Poly, about the military service. He asked Major Waite if it wasn't better for a college student to focus his attention on going to Officer Candidate School (OCS) after graduation rather than joining a ROTC Program during his college years.

"Not really," Major Waite answered. "There are three primary benefits of our ROTC program over that of OCS. Number one, each cadet in his junior and senior year receives \$40 per month, a small but handy income.

"Secondly, the ROTC cadet receives practical on-the-job training in leadership. A cadet is not a cold, green recruit when he enters active service.

"Thirdly and probably most beneficial," Major Waite continued, "is the fact that an ROTC cadet is guaranteed a school deferment as long as he keeps up his grades. Most young men want this peace of mind, especially during a time of international crisis."

As of now Bud hasn't decided what to do since it's so late in the game for him.

Like hundreds of thousands of male collegians throughout the country, he's going to have to make a decision very soon, or it will be made for him.

Religion Goes MOD . . .

collegiate climate is changing

by Karen Kinsman

Religious meetings for Poly students mean anything from testimonials to beer busts.

"Religious expression has to make sense to those participating in it," explains the Reverend Bruce Tjaden, Presbyterian and Congregational College Chaplain.

A wide selection of religious faiths is to be found on this campus. Even though it is a state supported college, there is a close bond between the administration and faculty and the Chaplain's Council, which includes all of the campus ministers and directors of the collegiate religious activities, and the student religious groups.

"There is a definite effort among these groups to bring religion around to a point where it can be understood and meaningful," says Father Charles Moore of the Catholic sponsored Newman Club. "The new generation of kids doesn't want theological dialogues that leave them out."

Other religious groups agree with this philosophy as each year sees more and more student initiated programs within the religious groups. Westminster Fellowship, the Presbyterian college group, is a good example of this.

Headed by a steering committee of collegions who pick all topics and areas of discussion, Westminster students have discussed in depth at their fireside forums such topics as LSD, therapeutic abortion, the "God is Dead" idea, the world, national and state political scene, sex, and the basic differences between Protestantism and Catholicism. As Rev. Tjaden explains, "We are exploring the religious dimensions by our own choice. No one is telling us we have to."

Including all Presbyterian activities - church, Westminster, and study groups - about 160 - 170 Presbyterian and United Church of Christ (Congregational) students are involved. As Rev. Tjaden

Presbyterian minister confers

points out, "A much higher percentage of member students attend these two churches than the percentage of member adults in the total community."

Some religious groups in the college base their meetings entirely upon the fundamental books of their faith. One such group is the Christian Science Organization. These students feel that it is important to stress the basic doctrines of their church. According to Cynthia Hansen, journalism sophomore and an active Christian Scientist, "We get our strength to solve everyday problems from Bible readings and from Mary Baker Eddy's Science and Health with a Key to the Scriptures." Testimonials and expressions of gratitude are also a basic part of this small, but quite active group.

The Wesley Foundation, the Methodist collegiate group, sees their religion as one which "rocks boats."

Meditation at Catholic mission

According to their advisor, Dr. Galus Thede, "The average church-attending student is not interested in Wesley. He has inherited his religion from his parents and has had nothing to break his complacency. The average Wesleyan is one who feels his religion is inadequate and wants desperately to change the situation."

The main areas of action for this group are the city, state and nation; the campus; and the church. Wesleyans are quite enthusiastic about programs such as Vista and the Peace Corps. They are also active in raising academic standards and relating the educational approach of the campus to what is happening in the world. Most collegiate Methodists feel an "up-dating of the church is definitely called for." According to Dr. Thede, "We study the organizations and figure out appropriate changes. It's a form of strategy and tactics."

One of the largest and most active groups on campus, and recently one of the most talked about, is the Newman Club. With 125-140 very active members and another 900-1000 who regularly attend one of the Sunday masses, this group most certainly represents a large percentage of the church-going proportion of the student body.

Operating somewhat similarly to the Poly Royal Board, Newman Club functions with twenty standing committees. These committees serve such purposes as planning for the future out-door pavilion, organizing worship services, planning for instruction, helping the poorer families of the city, and organizing social events such as hootenannies, barbecues and an up-and-coming beer bust.

Since October, a folk music mass has been given each Sunday at the Newman Center near campus. An average of 400-500 students attend this basically interdenominational service. Another segment of the modern Newman program that attracts 100 or more participants is the weekly Monday lecture in Science B-5. Father Moore lectures on subjects such as marriage and other basic points of Christian doctrine. Afterward, time is spent in discussing and analyzing the topic.

What do more conservative groups think of such ultramodern church-sponsored activities as the folk music and beer busts?

Rev. Tjaden expresses the opinion of several groups when he likens these Newman activities to a well-known television commercial: "Are we grown up enough to try it?" In effect, he is saying that every area of life involves religious question and concern. Faith is something one does, not just has. Each person must search for his whole self.

Dr. Thede sees the approach as "different, but very good if it proves to be effective."

Father Moore views Poly students as enthusiastic, imaginative and responsive to new ideas. "Religion is becoming more and more relevant to life."

Fraternities...

*Students who enjoy
the secret societies*

by Joe Hannigan

"Greek Week" bathtub races

Fraternities have long been characterized as "secret societies." Secret passwords, handshakes, and ceremonies enhance the bond of friendship, bringing college men together in what is commonly referred to as "Greek Letter Fraternities."

"I think fraternities are glorified drinking societies," commented Ken Week, senior electronics engineering major. "I haven't any special interest in them myself. For some people they are fine, but not for me. Oh, I suppose they do some good, and certainly help promote school spirit, so I'm not completely set against them."

Week's viewpoint is not uncommon on this campus. Fraternity life is commonly described as a life of merry making. An end of the year activity yielding to this point of view is "Greek Week." The purpose of Greek Week is twofold. Having a good time is the most apparent objective. In the shadows lurks the main point. Greek Week requires that all members of the fraternity houses work together toward a common goal, giving them experience in organizing a large and complex event.

A highlight of the celebration is the "Top Dance," when members from all of the fraternities along with their dates come dressed in togas, the typical Greek attire. Typical 'fun' events of the week include track and field sports and the annual bathtub races at Avila Beach. Each of the seven fraternity houses has a 'tub' mounted on wheels, with a steering system and a roll bar for safety.

Starting at the top of the hill on Front Street, they race down, side-by-side, two at a time in eliminator heats, until only two 'tubs' are left for the finals. Kappa Chi and Delta Sigma Phi made it to the finals last year, with Kappa Chi crossing the

line first and Delta Sigma Phi a close second. "I really enjoyed 'Greek Week' last year, and I'm looking forward to it again this year," said Carolyn Grant, senior journalism major. "I was impressed by the way the guys all work together on this event. It shows a real fraternal spirit. There was no animosity between any of the houses."

One of the stated purposes of the fraternity is to help the individual learn how to work with others towards a common goal.

"As long as you don't let the fraternity get the best of you, I think they are great," said John Fornof, printing major. "It's a great way to meet people. I don't see anything to be afraid of, since there are fraternities on all of the big campuses in the nation. I feel that fraternities are going to be changing soon. They will begin to accentuate scholastic achievement

Pajama party-barn dance

instead of party life."

A quarterly award in San Luis Obispo is the Scholarship Trophy, given to the house whose members hold the highest grade point average. Fraternity leaders hope the award provides an incentive to strive for better grades. Some houses hold weekly study sessions, giving "actives" and "pledges" an opportunity to improve their scholastic standing. Fraternity members realize that if a man flunks out of school, they have lost a member.

I'm against total recognition of fraternities," said Loren Van Engen, vice president of Delta Sigma Phi. "If the school were to recognize fraternities, I would only be in favor of partial recognition. If we were to be recognized as a club, not as a fraternity, it would be fine. We would lose our freedom if we were to be totally recognized. We would have to have chaperones at our functions, and many of our

Rodeo Contestants

by Jan Fairbairn

Barbara Baer, on "Biggin", shows barrel racing form.

The last class on Friday afternoon during Spring quarter seems never to come fast enough for college rodeo contestants. Hardly a weekend goes by but what students of a surprising variety of majors rush out of their last classes to go hook up horse trailers, load their horses and tack, suitcases and riders, and head off for the nearest rodeo, wherever it may be.

Cal Poly's rodeo contestants have excelled in college competition as a team and as individual competitors even before the first official rodeo team was formed in 1947.

There are four leagues in the rodeo world: Junior High and High School, College, Amateur, and Professional. Most of the old professional rodeo hands started out years ago in the small town rodeos, but today young people begin immediately in well organized junior high and high school rodeos. In some areas, there are junior rodeos where children as young as five and six years old ride calves and participate in other rodeo events.

Rodeo hands of the past were cow punchers who had come in from the range competing for prizes in riding and roping events. As the popularity of these contests grew and the prizes increased, contestants became "professionals" and began traveling from rodeo to rodeo. The professionals finally assembled into touring shows which now perform all over the United States and parts of Europe.

The rodeo contestants of today are of a much higher calibre. Many of today's professional rodeo contestants are college graduates who are regularly employed and "rodeo" on the weekends.

"Twenty-four per cent of the top Rodeo Cowboys Association (RCA) performers today were former National Intercollegiate Rodeo Association (NIRA) members," announced Cy Taillon, famous Cow Palace

Ribbon roping at its best

They ride to fame over a rugged road

Rodeo clown . . . bravest of all

announcer at last year's Grand National Livestock Exhibition and Horse Show.

Because of Cal Poly's excellent rodeo team record, the merchants of San Luis Obispo recently formed a committee which selects one girl and two boys from the rodeo team who have proven to be outstanding performers. These students receive a scholarship of \$150 per quarter for three quarters.

The three students chosen for this year's scholarships were Barbara Baer, a Social Science major from Sonoma, California, who was runner-up in the state championship barrel racer in amateur competition last year and who stands second this year. The other two winners of the scholarship are Bob Berger, an Animal Husbandry major from Holstead, Kansas, and Ned Londo, also an Animal Husbandry major, from Las Vegas, Nevada. Both have done exceptionally well in rodeo competition.

For our annual Poly Royal rodeo, local merchants donate prizes for the various events: bull-dogging, saddle broncs, calf roping, bareback and

traditional affairs would have to be cancelled, since they would interfere with school activities. We have nothing to gain and everything to lose by college recognition.

Van Engen's view is shared by many fraternity men. They would like to be allowed to enter floats in parades, and they want to sponsor queen candidates. Drinking at fraternity functions by those under age is seen as the biggest block to fraternity recognition. Limited recognition as clubs would open the way for fraternities to participate in college activities as well as being able to continue their social activities.

Fraternity men view such an arrangement as a compromise that should be suitable to both sides. Fraternity membership in the seven local houses—Alpha Tau Omicron, Alpha Sigma, Alpha Upsilon, Delta Sigma Phi, Delta Tau, Kappa Chi, and Phi Kappa Psi—is now approaching the 250 mark. Most fraternity men feel this arrangement would give the college some control over fraternity activities and the fraternities would have the opportunity to participate openly in school activities. Most assuredly, fraternities would value the opportunity to participate

Frat members judge contest

openly in school events, and suspension of this privilege would no doubt bring them under sufficient control of the college.

"Fraternities, as they exist, will not be recognized. They will have to change their image," stated Dean of Students Everett Chandler. "The liquor problem must be solved."

"Recently, the attorney for the State Colleges informed us that we would be responsible for any incident involving a minor who had been drinking at a fraternity affair. So, I would say that liquor is the number one problem facing us."

"I feel that if recognition is to come, it should be straight forward, and not a front. If clubs were to be organized by the fraternities and recognized by the college, it wouldn't be long before every club on campus would have a front organization. This would not solve the drinking problem," said Chandler. "As I see it, this would merely be a means for fraternities to participate in school activities."

"Now, I don't want to be adamant about this, and say 'As long as I'm here fraternities will not be recognized.' I don't want to cut off the dialogue, or exchange of information, if you will, between the two factions. Last year, Tom Consoli, who was Inter-Fraternity Council president, made great strides forward in helping improve the image of fraternities on this campus," Chandler said. "I hope this will continue until the issue is settled."

"If recognition is to come, I would rather see it come all at once, rather than recognize from organizations," Chandler said.

Foreign Students at Poly . . .

by Ellen Kishiyama

When a foreign student comes to Cal Poly for the first time, what are his attitudes, his impressions, his social adjustments, and how does he make friends?

Some 66 countries are represented on our campus and a sampling of impressions and attitudes of representative persons were sought at random.

A Hindu boy is amazed that Americans are so free and ignorant of other countries. "Cows are considered sacred in my country in India and Ceylon, we do not eat meat. We are strict vegetarians." Moslems from such countries as Indonesia, Libya, Jordan, Pakistan, Iraq, Iran, and Jewish students do not eat pork.

the English lab seeking extra help to improve their pronunciation and conversational command of the language.

A host program is also maintained by the Foreign Student office so that local residents may invite students from other countries to their homes. Warm and lasting friendships are created when American families invite foreign students into their home for an evening, either for dinner or for a social visit. These informal person-to-person relationships help bridge lasting international friendships.

Another organization welcoming the foreign students to Cal Poly is the People-to-People club which draws its membership from every country represented on campus. This group brings foreigners in contact with American culture and helps promote international understanding. They meet every Friday informally from 4:00 to 5:00 p.m. for a coffee hour in the International Room located in the post office building.

Within the People-to-People club, each country has their own organization. These groups alternate in presenting a program about their country at the monthly evening meetings.

International Week at Cal Poly was observed this quarter, culminating with a talent show. Under the theme of "People Need People", the audience was taken to faraway places where songs, and native dances were performed by students from Africa, Pakistan, Japan, West Indies, U.S.A., Iran, Hawaii, China, Arabia, South Vietnam and Latin America.

During this week, bull sessions in living quarters were held where students from abroad told about the cultures of their countries. Many questions were answered.

Inter-mural soccer teams are organized with one composed of Latin American students and the other of African students. Best players from these two teams make up the People-to-People team that competes against other California colleges.

Each June, a graduation banquet is held for the senior foreign students. Last year, 70 graduates were presented with Honorary Citizenship certificates by the San Luis Obispo Mayor. Scholastic achievement and leadership awards are also presented.

Construction of a Homecoming Float by the People-to-People members brought attention to the international student program at Cal Poly. Foreign students work in a leisurely fashion, visit and laugh a great deal, and they mix fun with work.

Club members also participate in Poly Royal activities. Representatives of several countries display items from home.

People-to-People Coffee Hour

An East African student from Tanzania feels that American students should approach foreign students, "as we are guests in this country." He was amazed by the abundance of food: "It took me some time to get used to the cafeteria food, but, now, I eat so much that I have gained 20 pounds in the months I've been here. However, my emotions mixed as the Americans leave the table when I talk to them. I am anxious to know them, but they have little interest in us."

The Foreign Student office in the Agricultural Extension Building has been a God-send to many of the persons coming from abroad for the first time. Volunteer helpers welcome the bewildered student, provide temporary living quarters until housing is arranged, arrange banking, and give information about the city.

Most of these students from other countries can read and write the English language fluently. However, many have difficulty speaking it. They come to

... American Students Abroad

by Toni St. Onge

It was once true that study abroad was available only to well-to-do students, but it is scarcely true today.

The California State College system as well as the University of California and various private institutions now offer low-price international programs for the educational enrichment of all those who seek it.

I participated last year in the program offered by the California State Colleges, living and studying in Tokyo, Japan, for a complete year. I consider it the most valuable 12-month period of my life.

I was one of a group of 24 students, seven of whom were from Cal Poly. We studied at the International Division of Waseda University, one of the leading universities of Japan. Instruction was in English and courses were geared to study of Japan and the Far East.

Living arrangements afforded perhaps the most rewarding experiences of the year, for students were placed in Japanese homes and were treated as members of the family.

"My house was small with only a few articles of furniture such as a television, one bamboo chair and two low tables. We sat on cushions, slept on mats on the floor, washed the dirty laundry and dishes in cold water, and lived through the winter without the use of heaters except for a sand-filled container holding live coals to take the chill out of the air."

Taking a bath involves another major adjustment, members of the family commonly use the same bath water, which is usually heated on a wood stove. Cleansing is completed outside of the tub. The final process is a long soak in the very, very hot water.

Nigerians at talent show

Many foreign students look forward to the Christmas party held each year, a custom not celebrated outside Christian countries. They enjoy exchanging gifts and sharing the traditional holiday food and singing carols.

Soon after school began this fall, the Cal Poly Staff Women's Club had its annual picnic for foreign students in Poly Grove. Nearly 500 enjoyed a typical American potluck. Many of the students wore their native costumes, adding to the gaiety of the day.

Dignity was necessarily cast aside as Americans tried to pronounce such names as Abdulrahman Bedri of Sudan; Klaus Dealbuquerque from Kenya; Sina Fayazmanesh from Pakistan; Tzivanopoulos from Greece and Abdulrahman Theneyan from Saudi Arabia. Sumptuous foods, informality, and just plain friendship keyed the social event which started a new college year of international relationships.

Some 85 foreign students, including one girl, are enrolled under the American Agency for International Development (AID) program. Most of them are from Africa and Asia and most of them are seeking agricultural degrees.

Foreign students sometimes suffer "culture" shock. They are bewildered and need a helping hand. Lack of communication with others seems to be a formidable problem and few people show personal interest in them. As former President Dwight D. Eisenhower said: "I am convinced that men are not so much separated by political and artificial barriers as they are by walls of misunderstanding and mistrust."

The differences in food were certainly an experience. Rice is usually served at every meal, and more fish than meat is eaten. We ate raw fish too, and most American students soon agree that it is not as bad as expected.

We had so many changes to learn to live with, but as one student said, "By the end of the year the adjustments that seemed so huge in the beginning became a natural part of our every day life and we learned to accept them as a matter of course."

Real knowledge and understanding of another people is probably possible only when one has experienced living their way of life. Living with a Japanese family, making friends with Japanese students, traveling within the country, and studying about Japan all combined to give me a greater awareness of that nation, its history and its future.

But even more important, American students in our program agreed that a year in a foreign country provided insights concerning our own nation. For the first time most of us were looking at the United States from the outside and often from the Japanese viewpoint, which enabled us to learn a great deal that we might not have otherwise.

On a more materialistic plane, we became more appreciative of the modern and sanitary methods which are employed so commonly here that they are taken for granted.

As the result of my year in Japan, my eyes were opened to the real-life drama of other people in this world besides Americans. The stories in magazines, newspapers and textbooks now come to life for me, and I feel I am a more sensitive person because of it.

so amazes East Africans

YOUR CLASS RING

**A New Standard
of Quality for . . .**

CAL POLY

Now...and through the years all the pride and memories of your College Days will be embodied in this rich 10K gold treasure. A new modern design with traditional beauty. Truly a symbol of accomplishment. A proud ring representing a proud tradition. In addition to the pride of wearing your class ring now, you will find it a symbol of recognition and introduction to new and valued friends all through your life.

A Parade is Fun...

by Sally Boss

Crops Club tours globe

Homecoming Sweepstakes Award

Fourteen years ago a tongue in cheek challenge voiced by an official of the Tournament of Roses Parade to his daughter, started Cal Poly's march to Pasadena.

The challenge was that a college could possibly construct and decorate a float to meet rigorous specifications required for the Tournament of Roses representation. His daughter (we've lost her name), who was attending Cal Poly at the time, proceeded to organize a group of students to show her father that he was wrong.

That year Cal Poly, utilizing both personnel and resources from both of the campuses, entered a float in the parade.

Since its conception, the Cal Poly floats have won eight first places in the Educational Division, two seconds and one third.

The theme of the parade this year will be "Travels in Fantasy". The college's theme will be "A Child's Fantasy."

Cal Poly's float will be a large animated replica of Pinocchio. It will be constructed with fresh flowers in their natural state, as specified in the rules. Many of the flowers are grown on the Poly, Kellogg, and the others are purchased from other growers. Starting next Spring, flowers will be grown here. Even if the flowers are not used on the float, they can be traded for the flowers the school needs.

Although Cal Poly is now two separate campuses, the annual float will still be constructed by the schools. This campus has allocated \$700 and the other campus has allocated \$900. The reason the cost is so low is that many of the flowers are grown by the school and the labor is free. Many of the Homecoming members volunteer to work on other Cal Poly floats in return for flowers.

Business firms have offered from \$20,000 to \$25,000 to have Cal Poly's spot in the parade. A decision has been set on the number of entries and many people have tried desperately to be included. Cal Poly has to give up her spot.

On Jan. 1 after the parade, a display of all the floats will be held at Victory Park, where they will be viewed by the public. The exhibit will open at approximately 1:30 p.m. and remain open until 10 p.m.

This year's Tournament of Roses entry

...for everyone

Float construction — many hours

On Jan. 2 it will be open from 9 a.m. to 10 p.m. Since 1960, Cal Poly has also entered a float in the Fresno State College Homecoming parade. The float is entered during those years when the football game is held in Fresno. It is designed and constructed by the Rally Committee.

This year's entry, entitled "Who's Bell?" was a giant replica of the victory bell, which is a traditional symbol of victory for the Cal Poly-Fresno State football game. The giant green and gold crepe paper bell was 18 feet long and nine feet high.

Designed by Hal Nomann, a senior majoring in Electronic Engineering, the rough frame was built on campus the week of the parade, disassembled and trucked to Fresno on Oct. 14. Fortified with coffee and hot chocolate, over 100 members of the Rally Committee worked late into the night to put the float together. Judges gave Cal Poly an award for the "float that came the farthest."

Cal Poly's own Homecoming held late in October, was also a scene for many festivities, and among them was the local parade with its array of floats. Students from clubs and organizations throughout the campus designed and constructed float entries for the parade held in downtown San Luis Obispo.

Cal Poly has had a busy float construction season, as usual. From small floats in the Homecoming Parade to its entry in the Tournament of Roses, the school has shown its enthusiasm for color and parades.

Athletic Grants

A growing concern

by Karin Froyland

Athletes must come to Cal Poly primarily for an education because that's the only real inducement offered them. This is a commendable situation, team supporters comment, but it's nearly impossible to compete.

This college is in a league of large schools located in large cities. Consequently, it has difficulty participating equally on a financial basis. The California Collegiate Athletic Association limits athletic grants and aid to \$45,000. Conference policy specifies that \$25,000 may be given in indirect grants and \$20,000 may be offered in wages.

The Mustang Boosters, a local businessmen's group, has a total budget for 1966-67 of \$12,500. Football players receive \$6,000 distributed among 23 players, \$3,500 will go to basketball players while the balance goes to wrestlers. Those athletes not able to support themselves financially work at a state job paying \$1.35 per hour.

Such a grant and aid program is a hinderance when the coaching staff goes recruiting each spring.

Every CCAA student body helps financially with the grant and aid program. Cal Poly at Pomona grants \$3,000, San Fernando Valley State, \$10,000, Long Beach \$13,000, San Diego \$35,500, Los Angeles \$20,000 and Fresno State \$20,000. Until this year, the Associated Students, Inc. of this campus provided only funds for travel, stadium lighting and maintenance. Recently, a \$900 grant was allocated by the ASI and \$300 was given by the Alumni Association.

Currently the ASI is making preparations for a campus wide booster club. The club will coordinate activities to raise funds for athletic grants. Events such as dances, alumni basketball and wrestling are proposed. Students, faculty and staff would be eligible for membership by payment of dues. No other college has such a system for supporting their athletic program.

Rodeos offer thrills

Continued from Page 13

bullriding for the men; goat tying and barrel racing for the women.

In addition to these prizes, winning teams and individuals earn NIRA points. These points accumulate towards the individual's and team's credit. At the end of the year, the top man and woman in each event receives an individual trophy as do the top men and women's team. The top individual in each event and the two top teams in the league are eligible for the NIRA finals usually held in the latter part of June.

NIRA has become the stepping stone for professional rodeo stars. Some of these well-known rodeo cowboys and girls were products of Poly's rodeo club, Boots 'n' Spurs, advised by Bill Gibford.

A few proteges include Jack Roddy, San Jose, who won NIRA National Championship All-Around Cowboy and saddle broncs. (He had won five All-Around Cowboy Championships in one year in our own region!) Roddy is presently leading in bull dogging for National Championship honors.

Another successful cowboy is Bill Martinelli who has been the top saddle bronc rider for the past ten years.

C.W. Adams, of Atascadero, is the most recent graduate to turn professional rodeo cowboy. He has cut a colorful figure gaining honors by being in the top 15 bull riders in the nation during 1966. This makes him eligible to compete in the finals to be held in Oklahoma this December.

The women's team, which was started in 1957, has also produced some top-notch performers. Merna Muller earned the title of the World's Champion Calf Tyer while Diana Whitman won the Regional Championship honors for barrel racing in 1960. Jeanie Foote, another Poly protege, was honored as the Regional Champion Goat Tyer for 1963. Last year's team captain, Diana Johnson was the Regional Champion Goat Tyer and went on to represent our school at the finals held in Laramie, Wyoming.

Rodeos are fast becoming as popular as football or baseball. It has been considered within the top 10 spectator sports. Rodeo contestants, just like any other performer of a popular sport, finds it worth while to become a professional and "ride the circuit."

Looking at Off-Campus Survival

by Carolyn Grant

The search for meat bargains

There are 7755 students enrolled at Cal Poly this quarter and—approximately half of them are faced with preparing at least one nutritional, and yet edible, meal each day.

In most cases coeds have had experience preparing meals, but it may be a relatively new experience for the college male.

One student indicated that he thought what he had learned in the kitchen of his apartment was as informative and interesting as some of his school subjects.

"In the past three years he has learned how to cook hamburger about a hundred different ways," informed his roommates.

Most students are more than sensitive to the high cost of living in San Luis Obispo. Resulting from this sensitivity is a cat and mouse game between local merchants and shoppers.

Students interested in winning a few rounds of cat and mouse might follow a few of these suggestions.

On Wednesday the local merchants publish their weekly bargains. It might be profitable to see where the best buys in town are.

In a survey published in the "Ladies Home Journal" it was found that the average shopper spends about half an hour in the grocery store, and for every minute he stays "overtime" he spends another 50 cents.

So make a list before going shopping, follow it, and leave the store as quickly as possible, don't

browse, it could be costly.

Experts advise that when shopping for a bargain don't let yourself be taken in by quantity sales. For example, ten cans of peas for a dollar is no saving if no one in your household or apartment likes will eat the peas.

Many times store promotion is misleading to the shopper. A product might be advertised in the front of the store at five cents for a dollar; while the same size can will be selling in its regular shelf position for 19 cents a can.

One male student said that since he has had a shop for his meals while at school he has become more aware of food prices, and finds inconsistencies in food pricing all the time. "It really makes me to find a can of peaches for 35 cents on one end and then find it again just around the corner a cents cheaper," he stated.

It might also be wise to read the labels on canned and frozen dinners. If the label on the can of beef stew mentions potatoes and vegetables first, it simply means the product contains more vegetables than meat.

Further, T.V. dinner fans, you should check those labels too. If it mentions gravy before it mentions the meat, you can expect to find more gravy than anything else.

Hmm 'love to cook!!!

from the Recipe Corner . . .

Would you like to help write a cookbook? There is a nationwide contest open to all college students who wish to enter their favorite recipe(s).

The competition is being conducted by Richard Mullins of the Doubleday Publishing Co.

Mullins is writing a cookbook on college cuisine and needs your help in obtaining desirable dishes.

If your recipe is selected the author will send you a free copy of the forthcoming publication. Your name will also appear in the book next to your recipe.

If you would like to enter, send your recipes to Richard Mullins, 707 Poinsettia Drive, Eustis, Florida.

For those of you who have trouble thinking of something different and yet good to eat, you might try a saucy swiss steak, or tomato and beef casserole for a change.

Saucy Swiss Steak

2 lbs of chuck steak

1-3 cup all-purpose flour

1 teaspoon salt

1/4 teaspoon pepper

2 tablespoons fat

2 8oz cans of seasoned tomato sauce

1 tablespoon vinegar

1 tablespoon Worcestershire sauce

1 tablespoon sugar

salt and pepper to taste

First combine the flour, one teaspoon salt, and 1/4 teaspoon pepper, and coat the meat, brown in the hot fat.

While the meat is browning combine the two cans of tomato sauce, sugar, vinegar, and Worcestershire sauce, salt and pepper.

After the meat has browned, pour the sauce over the meat and simmer uncovered for five minutes. Add one medium sliced onion, and cook, covered, at 350 degrees for an hour or until fork tender.

Beef and Tomato Casserole (with a Chinese flavor)

2 lbs round steak

2 tablespoons of corn starch

salt and pepper

3 tablespoons soy sauce

3 medium tomatoes

1 green pepper

1/2 cup beef bouillon

Have the butcher cut the round steak into 1/2 inch strips, then cut them in bite size pieces yourself.

Combine the salt, pepper, corn starch and soy sauce and add the meat to this mixture. Dredge the meat until it is completely covered with the corn starch mixture.

Slice the green pepper and saute it in hot fat in an electric skillet at about 350 degrees. Remove the limp pepper and place the meat in the skillet to brown.

While the meat is browning slice the tomatoes, and then place them, and the pepper into the skillet. Add the half cup of bouillon and simmer until the liquid forms a rich brown gravy.

Serve over rice or Chinese noodles.

HINTS

for the unhandy housekeeper

Here are some suggestions or "hints" you might use to reduce your housekeeping burdens.

If while preparing a meal, you, by some unfortunate stroke of luck, burn something and it sticks like glue to the pan, just put two tablespoons of cream of tartar or baking soda in the bottom of the pan, add about a cup of water, and boil the contents until the burnt material softens. You will then be able to scour and clean the pan for further use.

Also if you want to remove coffee stains from a pyrex coffee pot, place a few ice cubes in the bottom while the pot is still hot, then wash as usual.

Have you ever arrived home from your afternoon classes and found no one has remembered to defrost the meat for the evening's meal? Don't panic. Girls, get your hair dryers out, or fellows go borrow one from a feminine neighbor. It will rapidly thaw that meat with a minimum of food value loss.

Also, while you have the dryer out, use it to start your barbecue. It works like an electric bellows and automatically fans your fire.

Window washing is always a joy, but it's nice to be able to look out the window and tell whether it is day time or dusk.

Instead of wasting your money on a cleanser, use vinegar and water. It cuts grease and grime as well as any product on the market. Instead of using towels to wipe the windows, use old newspapers, they leave an extra sparkle on the glass.

If you are interested in acquiring unusual and inexpensive gift wrappings, you might try the local paint and paper companies. They have old wallpaper sample books which give you an endless array of wrappings.

Do you hate yellowed tennies? Whiten them up by washing them first as you normally would, then sprinkle salt over them and let them dry.

A Sporty Curriculum

by Karin Froyland

Avila 101 is the first course enrolled in by a new student at Cal Poly. The course is located at Avila Beach and the surrounding area. When the surf is up and the sun is shining the local beaches are embellished with Poly students. Those who are not

at home on a board observe from the beach and grade their fellow students. The course is open to all and at the same time it doubles for education.

Food 102 is the next course offered at the area. With world famous Pismo Beach, students dig a limit of clams in a short time. The next back to the course, is that only clam digging is taught. After, the clam is obtained the student does not know what to do with it. Maybe Clamming could be added to the curriculum.

Crabbing and Abbing 104 are taken concurrently. The techniques taught are fairly simple. Crabbing. Nets may be rented at Avila Beach. Nets are basically like a basketball net but with loops at both ends. A fish head, which can be purchased at any fish store for twenty cents, is placed at the bottom of the net. Lower the net into the water. It is sitting on the bottom. Since crabs are attracted

... just one last wave

they are attracted by the fish head, the net must be raised frequently to see if there are crabs munching on the head. If you are lucky you can catch three or four crabs at once. Crabs are kept for twenty minutes in water, vinegar is poured over them then washed and cracked. For those who want gasoline money, the Cambria coast is the place for crabbing.

To excel in the abalone class one must learn to capture the shell fish by diving or by using a tide. In either case the shell must be pried from the rocks but it is all most rewarding. After the tide is over the pounding party begins. The abalone is dipped in an egg batter and rolled in crushed cornmeal and then fried about one minute on each side.

Give me a rod . . a reel . . and a quiet stream

There is one advantage to the course besides cut bait, sun and wind burn and a lot of empty shells. . . free food.

The rocks along Shell Beach and Rancho Montana De Oro are the setting for elementary Rock Fishing. For the patient type of student who likes to combine courses this is an excellent opportunity. While waiting for a strike the student can study one of his more academic subjects, or just sit and wonder as seals and porpoise travel up and down the coast.

For those students who do not turn green when out on the calm sea Morro Bay Excursion Fishing 127 is an excellent course. Although this and the Avila Beach ocean fishing is used more by clubs on campus than individual students. For \$5 per person a group can fish all day for salmon, red rock cod, blue fish and bull head.

Sailing 101 through 405 is taught by the Corinthians and is open to any student.

For those students that prefer less sand and surf boards and more open meadows and streams there are courses for them.

Hunting majors have a full but varied curriculum. Starting the school year right off is elementary Game

Shooting . . . Anyone?

201, a quicky course since the deer season closes about September 20, and dove season the 30th. The final exam is offered during a 10 day dove season in December. Poso, Creston and Atascadero areas are the principle settings for the dove hunting while the deer are found north of San Simeon and Poso.

For those students who get deer, the following party recipe is outstanding. For every 10 pounds of meat, mix 1/2 cup salt, 1/2 gallon of wine, 4-5 cloves of garlic and pepper to ones taste. The meat should be 1/4 inch thick, 1/2 inch wide and as long as desired. The meat is mixed with the ingredients and dried in a 350 degree oven for 10 to 12 hours.

And 304 is another fall course and is followed by 305 and 306 winter and spring.

Quail season runs until the first of the year and these are held at Oso Flaco lake and Morro Bay. For more advanced students Chucker are quite a challenge. A Chucker is two to three times the size of quail and are also in season. Although the bird is larger, it can fly a long distance without landing, so Quail must stop frequently. The Carrisa area is the class laboratory.

Ducks are the class project until the end of October while wild Pigeon is the target in December, when the birds leave the Sierra and make their winter home near Adelaide, west of Paso Robles and Atascadero.

Lesser Goose 312 is offered winter quarters at Morro Bay. Brant season runs from December until January 1. Brants are a new game bird in the area and weigh 3-5 pounds.
